

Lecture 13

Unit 5 How to Develop Effective Reasoning

What is Reasoning

Logos

Appeal to the audience's capacity for logical reasoning.

Ethos

Establish the author's credibility with the audience.

Strategy

- Draw attention directly to your credentials.
- Draw a portrait of your personality and character.

Pathos

Use emotional appeal to persuade the audience.

Modes of Reasoning

Deduction

The reasoning process which takes place when moving from one statement (the major premise) through another (the minor premise) to yet another statement (the conclusion) is called deduction.

- Make a general claim
- Apply it to a smaller example or case
- Draw a conclusion

Induction

Induction uses information about observed cases (specific facts) to reach a conclusion about unobserved cases (general facts).

- Present some examples
- Draw a conclusion/claim based on them

Activity 2

1.
 1. Deductive and sound.
2.
 2. Deductive and sound.
3.
 5. Inductive and unsound.
4.
 7. Inductive and unsound.

Unit 6 How to Avoid Logical Fallacies(No exam)

What Are Logical Fallacies

Logical fallacies are logically unsound statement.

Types of Logical Fallacies

Fallacies of relevance

The lack of a relevant logical connection between premise and conclusion.

Personal attack

Attack the person rather than the argument itself.

Argument to the people

Use an appeal to popular assent by arousing the feelings and enthusiasm of multitude rather than building an argument.

Appeal to tradition

Assert a premise just because people always believed or done it.

False authority

Build the argument just by an authority figure believes or does something even if it is not expertise.

Fallacies of defective or weak induction

A lack of understanding of the required logical link between premise and conclusion.

Post hoc, ergo propter hoc

One event causes another just because they occurred in sequence.

Hasty Generalization

Induct with insufficient evidence.

Non sequitur

Argument does not follow from the previous statement.

Fallacies of presumption

Unstated or shaky presumption is made.

Self-contradiction

Argument is contradict with premises.

Circular reasoning

State a argument by restating it in different words as evidence.

The "slippery slope" fallacy

Argue that once the first step is taken, a second or third step will inevitably follow.

Either/Or fallacy

Reason that there are only two possibility when there may be many.

Faulty analogy

Presume that if two things or people are alike in some ways then they will be alike in other ways.

Fallacies of ambiguity(less in exam)

Ambiguous language.
