

Lecture 7

Unit 5 Environment and Development--Cause and Effect

Definition

Cause is **why** something happens.

Effect is **what** happens as a **result** of a cause.

Two Types of Cause

- immediate cause(**readily apparent**)
- ultimate cause(**not so apparent**)

Criteria

- The cause happen **before** the effort.
- Two things are **related** in the first place.
- The effect can only be explained by the cause.

Fallacies

- Confusing Cause and Effect
- Post hoc fallacy(Accepting A is the cause of B simply because A occurs before B)
- Ignoring a common cause

How to Develop Support(For Body)

- In time order(chronological order)
- In space order(spatial order)
- In emphatic order(save-the-best-for-last)

Practice

P 134 Activity 5
